**DETAILED ACTION**  
**Allowable Subject Matter**

**1. Claims 21-26 are allowed.**

The following is an examiner's statement of reasons for allowance: Claims **21-26** are allowed since certain key features of the claimed invention are not taught or fairly suggested by prior art. **In claims 21 and 26** , “a computer interface controller including cursor and button controllers, the computer interface controller comprising: a housing adapted to reside within a person's fingers against a person's index and middle fingers; affixing means for attaching said housing within a person's fingers to a person's index and middle fingers; a cursor controller for providing X-Y control of a cursor on a computer screen, said cursor controller positioned within said housing so as to be controlled by a person's thumb when said housing is attached to a person's index and middle fingers; a first button member affixed to said housing, said first button member positioned so as to be depressable by a person's index finger when said housing is attached to a person's index and middle fingers; and a second button member affixed to said housing, said second button member positioned so as to be depressable by a person's middle finger when said housing is attached to a person's index and middle fingers”. The closest prior art How (2003/0174124 A1) teaches a mini mouse operation at finger tip includes a function of an input to applied to surface of any kind, such as, manipulated by a thumb with the action of typing involving a keyboard and a compact size providing effective control over cursor movement with ease and efficiency, Movahed (2002/0101401) teaches a thumb mounted control device for computer including a mounting sleeve for controlling cursor movement and for transmitting the control signals from the mouse to the computer, however, singularly or in combination with

other prior art, fail to anticipate or render the claimed limitations such as " a housing adapted to reside within a person's fingers against a person's index and middle fingers; affixing means for attaching said housing within a person's fingers to a person's index and middle fingers; a cursor controller for providing X-Y control of a cursor on a computer screen, said cursor controller positioned within said housing so as to be controlled by a person's thumb when said housing is attached to a person's index and middle fingers; a first button member affixed to said housing, said first button member positioned so as to be depressable by a person's index finger when said housing is attached to a person's index and middle fingers; and a second button member affixed to said housing, said second button member positioned so as to be depressable by a person's middle finger when said housing is attached to a person's index and middle fingers".

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Bajramovic (2005/0162417 A1) teaches a computer input device includes a user's fingers and adjustable straps for controlling cursor movement on a video display.

Jarra (6,587,090 B1) teaches a fingers securable computer input device includes an input mechanism that is secured to the finger tip pad of a user's index finger.
